

HAZMAT Kit

The HAZMAT Kit can be used with the Urban, Emergency Services, or Bushfire Models to develop scenarios involving different types of hazardous materials.

These exercises enable facilitators to apply company or agency standards as personnel respond to the release of one or more hazardous products. These incidents can also be integrated into other scenarios involving road crash, rail crash and fires.

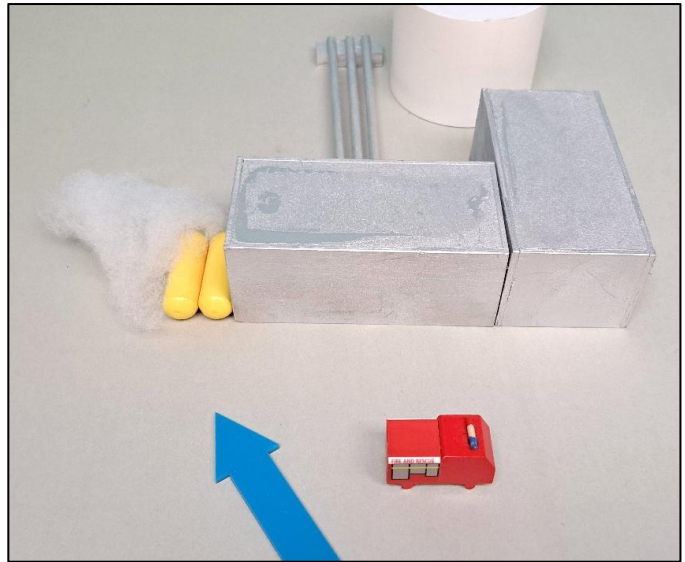

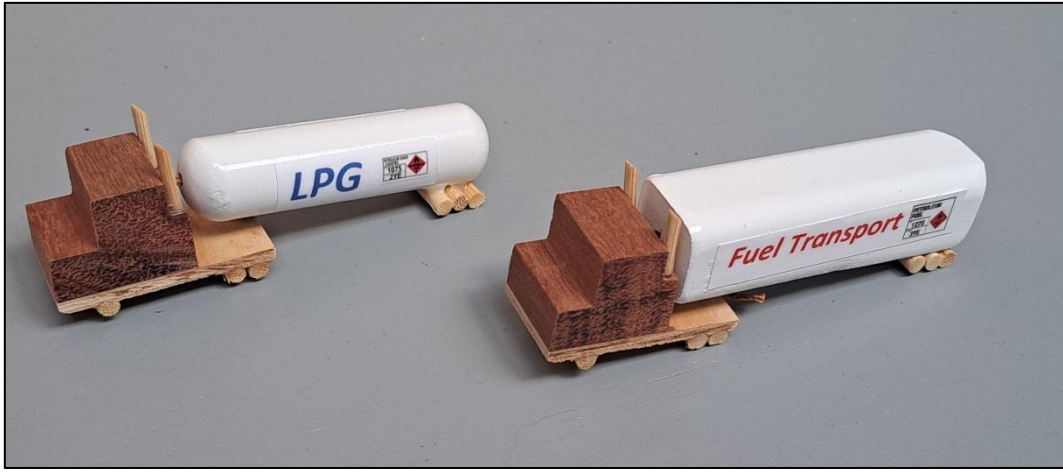

This kit is available as a package for **\$175 (includes GST, current January 2026)**. To design your own HAZMAT kit, please select your items from the tables on the following pages and return to info@bushfiremodel.com.au for a custom quote.

This table describes the contents of the HAZMAT Kit and can also be used to customise an order by completing the quantity required column.
